5.2 PARTICULARS

Information Management System (LIMs) - Specifications.

System Overview

The LIS is a web based system that adheres to open standards, follow multi-tier architecture and service-oriented architecture (SOA). It is developed in the latest Java platform.

1. User Accounts

User accounts will have access control managed through roles and privileges. Privileges will be assigned to roles and roles to users. Roles will take the position title for convenience (e.g. HOD) and user can be assigned to multiple roles. Users will only be authorized to access data and functionalities assigned to their roles. Every user will have a username and password to be used as the login credentials. The password will be encrypted and added another security layer called salt.

2. Patient Management

The LIS maintains information on all individuals that are assigned any tests in the lab. Certain users may be able to change patient information depending on their roles. The patient management function allows for all lab tests done for a specific person over time to be linked to that particular individual.

3. Provider Management

Providers are either individuals or organizations that submit specimens for testing to a lab. The LIS keeps a record of all providers that have the ability to send specimens and receive results.

4. Test Catalog Management

Tests are grouped in panels which act as an order set. The LIS manages all the tests and procedures that are carried out by the lab, majority of which are pre-defined in the system. The LIS allows for tests to be added, deleted or modified from the Test Catalog.

5. Request Management

This function allows maintenance of all requests for lab services to be performed. A request consists of a specific test or tests to be performed and other associated data. A request is also linked to a specific individual.

6. Specimen Management

The LIS allows for information regarding the handling of specimens from the time they are received at the lab all the way to disposal. Unique identification, including labeling of the sample and all of its aliquots, is required so that results can be matched back to the originating

sample. Additionally, samples may be sent to third parties for confirmatory testing or as overflow.

7. Specimen Tracking Management

Besides the sequential processing from receiving through testing, specimens and samples may spend time in intermediate storage, as well as be stored for subsequent testing following the initial testing or stored as evidence. Long-term specimen and sample storage may also be required, including products/organisms grown from them. This LIS keeps track of every stage that the specimen goes through including registration, short term and long term storage.

8. Testing Management

This includes the functional requirements of the processes after a specimen has been received and registered in the LIS and before the result data is available for dissemination. Manual entry of results or automatic capture from a lab instrument, flagging of abnormal values etc are all required functions of the LIS.

9. Scheduling Management

This function allows for prioritizing and processing the test workload. The LIS is able to manage urgent requests, sample holding time, and other factors relating to the timely processing of the test requests.

10. Results Management

The LIS maintains information related to the test results including entry and reporting. Users have limited access to results based on their roles and only certain individuals will have the authority to modify results. Reference ranges are also included.

11. Reports Management

The LIS will generate and deliver reports in either hard copy or electronic format to authorized users. These reports will be stored or generated ad hoc and will allow the user to view data on requests received, specimens registered, pending results, workload etc. The user will be able to define the types of reports they need.

12. Patient Care System Integration API

The LIS provides restful web-services for integration with existing patient care systems.

13. Quality control Management

The system maintains quality control checking and cumulative weekly and monthly quality control reports

14. Billing Management

The system should have a billing component for tests and other entities. It should be able to tabulate items to be billed, apply applicable rates, create invoices and support documentation.

15. Inventory management

The system should provide capability to manage various aspects of inventory control that include, ordering, tracking, distribution etc. of laboratory consumables and reagents. Be able to denote the stock levels at all times for various items.

USER ONLINE ACCESS

1. The LIMs should provide online access to various personnel (Connected locally or remotely).
2. Online access to dedicated user accounts
3. The system to maintain list of users and their profiles

MINIMUM SYSTEMS REQUIREMENT

The system should have an off line systems to cater for cases when there would be intermittent inter network or no internet connectivity.

Standards Compliance

The following table summarizes the technical open standards requirements for the LIS.

<i>Model Area</i>	<i>Standards</i>	<i>Impact</i>
<i>Service Access and Delivery</i> <i>Service transport</i>	<i>TCP/IP - Transmission Control Protocol / Internet Protocol</i> <i>FTP - File Transfer Protocol</i> <i>LDAP- Lightweight Directory Access Protocol</i>	<i>Standardizes the way information is sent between network entities</i>
<i>Component Framework</i> <i>Presentation/Interface</i>	<i>HTML - Hypertext Markup Language</i> <i>XML - Extensible Markup Language</i> <i>HTTP - Hypertext Transfer Protocol</i>	<i>Standardizes the way information is exchanged between applications</i>

	<i>HTTPS - Secure Hypertext Transfer Protocol</i>	
<i>Service Interface and Integration</i> <i>Service discovery and description</i>	<i>WSDL - Web Services Description Language</i> <i>UDDI - Universal Description, Discovery and Integration</i>	<i>Standardizes on the way Web services are described and discovered</i>
<i>Service Interface and Integration</i> <i>Interoperability</i>	<i>SOAP - Simple Object Access Protocol</i>	<i>Standardizes the way interoperability between different software applications is achieved</i>

Platform

It is desirable that this LIS be developed using the latest technologies. The two technologies that most current systems are developed in are either Sun Microsystems' Java 2 Enterprise Edition (J2EE) or Microsoft's .NET Framework (.NET) platforms.

Operating System

The LIS must use established and non-proprietary computer operating systems for both clients and servers.

The list of operating systems recommended for server side applications includes recent versions of:

- Microsoft Windows Server, or
- UNIX – Sun Solaris, IBM AIX or HP-UX, or
- Linux

Database

The LIS must use established and non-proprietary database server engines. The lists of database servers recommended are:

- Oracle Database Server, or
- Microsoft SQL Server, or
- IBM DB2, or
- Open source MySQL.

The list of database servers recommended for stand-alone LIS applications used at the local and clinic levels includes recent versions of:

- Microsoft Access
- Open source MySQL.

A tool that can be used for building applications and is non-proprietary but uses the Access database engine is Epi Info 3.2 (Windows).

Connectivity

The LIS will be providing critical services to the GAP users and their clients. Therefore, there is a need to have the LIS support data exchange with various clients and systems that operate on a multitude of disparate platforms;

Client Tier

To achieve connectivity between the Client Tier and the LIS, the LIS should support one or more of the following protocols:

- Transmission Control Protocol / Internet Protocol (TCP/IP): Used as the underlying protocol for all Internet based communications.
- File Transfer Protocol (FTP): Used to transfer batch files from and to the LIS.
- Hyper-Text Transfer Protocol (HTTP): Used to communicate with client Internet browsers and web services clients.
- Hyper-Text Transfer Protocol over Secure Socket Layer (SSL) (HTTPS): Used to secure HTTP communication by utilizing encryption keys.
- Wireless Access Protocol (WAP): Used to communicate with mobile devices such as Personal Digital Assistants (PDA), handheld PCs and smart phones.

Resource Tier

To achieve connectivity between the LIS and the LIS, the LIS must support one or more of the following

Protocols:

- TCP/IP: Used as the underlying protocol for all Internet based communications.
- HTTP: Used to communicate with external web-based systems.
- HTTPS: Used to secure communication with external web-based systems by utilizing encryption keys.
- Simple Mail Transfer Protocol (SMTP): Used to send email to various clients and systems.
- Lightweight Directory Access Protocol (LDAP): Used to communicate user authentication, authorization and groups with and LDAP compliant.

- **Extensible Markup Language (XML):** Describes the content in terms of what data is being described. XML is used to describe file contents and communication with web services.
- **Health Level 7 (HL7):** An ANSI standard for healthcare specific data exchange between computer applications. The name comes from "Health Level 7", which refers to the top layer (Level 7) of the Open Systems Interconnection (OSI) layer protocol for the health environment.
- **Flat File:** Includes proprietary formats or designated character delimited formats. The LIS must provide capabilities to parse map or create such flat files depending whether the file is to be imported or exported.

4.5. Security

The system-wide security must support the following:

- Compliance with the HIPAA privacy regulations.
- User authentication by maintaining unique and encrypted user ID and password per system user.
